

# How to Show Content

What is content?

- PowerPoint Presentations
- Web Pages
- Documents
- Pictures

You can connect a laptop to the Visual Concert and display content

If you have sound with your presentation, connect the sound cables which are shown in **GREEN** (real cables are black)

If you need internet access, do not use the cables attached to the Visual Concert cable. You will have better performance with an Ethernet cable connected directly to the wall jack into port on your laptop.

Use the **PURPLE** buttons on either the Remote  or the Visual Concert  to start and stop sending content.
