

Master Your New Font Manager

Font management is much improved in Windows 7. The Add Fonts dialog is history, and in its place is new functionality within the Fonts folder itself.

The folder now shows font previews via each font file's icon (visible with Large or Extra Large icon views).

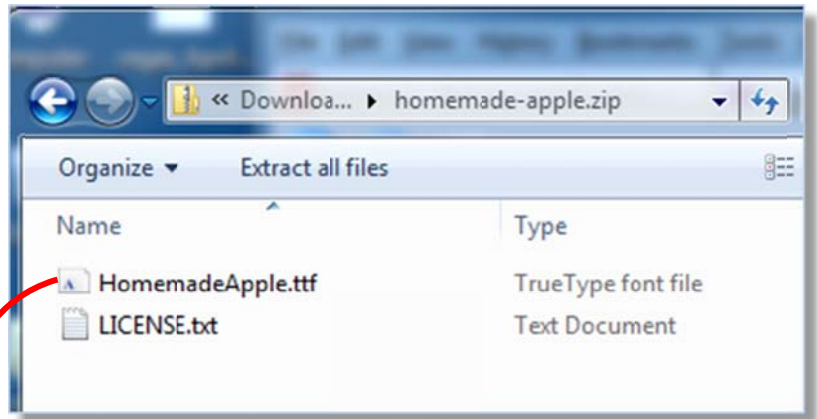

Fonts from a single set will no longer show up as different fonts; they're now combined as a single family, which can be expanded by double-clicking the icon.

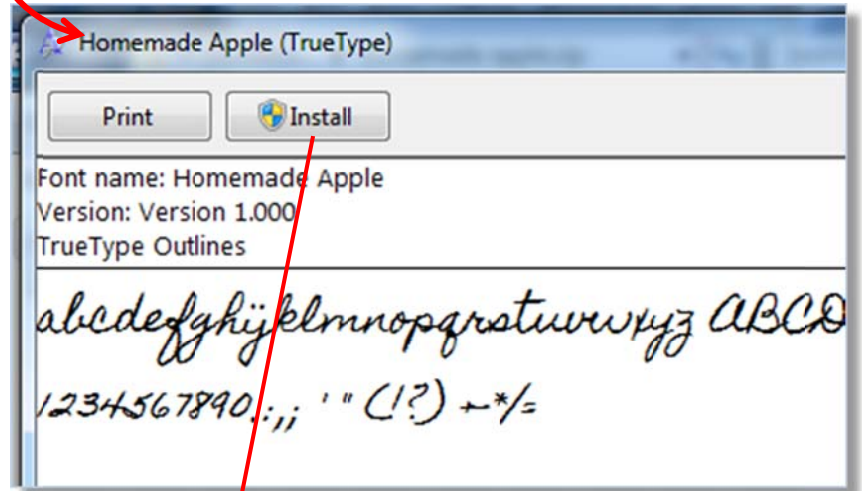

To install a new font, download from a trusted source. (They usually come as a .zip file.)

Double-click the zip file and then double-click on the font name.

Click Install

The new font will appear in your Fonts folder
