

DFMCH ReCHARGED Vision Conference

September 17, 2015

Medical Student and Interprofessional Education Mission Area

Vision Statement:

- In pursuit of health excellence and equity, the UW DFMCH will be at the leading edge of quality and innovation in interdisciplinary education, both locally and nationally. We will do this by identifying, supporting, and learning from highly-functioning inter-professional teams within the department and beyond to create models for learners that emphasize team-based primary care, community engagement and population health.

Green Hat: Ideas to implement the Vision

1. If this were to be a new direction for the Department, what would we have to do to make it work?
2. What blocks would we need to be removed?
3. What Strategies would we need to create our ideal future?

- Master Teacher (supervisor)
 - Additional FTE with title
 - Additional faculty development
 - Creative funding for teaching
 - Community practice group
 - Insurance providers
 - Create a “grant incubator” for funding of team based primary care, community engagement and population health
 - Revise a comp plan to incentivize teaching by everyone
 - Create a task force to delineate specific “asks” for/from UW
 - Partner with other departments focused on community and schools engagement – SOHE, SW, Population Health, Morgridge, etc.
-
