How to Show Content

What is content?
- PowerPoint Presentations
- Web Pages
- Documents
- Pictures

You can connect a laptop to the Visual Concert and display content.

If you have sound with your presentation, connect the sound cables which are shown in GREEN (real cables are black).

If you need internet access, do not use the cables attached to the Visual Concert cable. You will have better performance with an Ethernet cable connected directly to the wall jack into port on your laptop.

Use the PURPLE buttons on either the Remote or the Visual Concert to start and stop sending content.
